

Can a floor be part of the healing process?

Yes.

Understanding and implementing a solution for the needs of your patients and staff ultimately drives your decision about the materials you bring into your healthcare facility. Each material brings its own unique benefit to meet a specific need: providing privacy, offering a place to sit and even allowing the sun to shine into a patient room. The flooring you select should be durable, easy to install and maintain, resist stains, be hygienic, slip resistant and affordable.

But Can A Floor Do More?

Can the floor reduce the risk of injury from a fall? What about enhance the health and

safety of your staff? Can it significantly quiet the healing environment or contribute to the financial sustainability of your facility? Yes.

At Ecore, we believe a floor can do more. The floorcovering you select for your healthcare facility should go beyond your expectations. We engineer performance well beyond industry standards related to your every day challenges and address patient safety, staff wellness and noise.

Through years of dedication and manpower, Ecore has created itstru technology that features unparalleled levels of recycled content - an Ecore rubber underlayment - that it can marry to any proven flooring product. The result? An unprecedented, durable flooring system.

Healthcare Flooring Options

Rx

Rx designates a unique group of carefully engineered and innovative flooring products developed to meet the safety, ergonomic and acoustical challenges experienced within clinical spaces. Rx products are high performance healthcare resilient floorcoverings fusion bonded to Ecore's proven recycled rubber backing via its tru technology. Available in a classic wood, contemporary natural visual or as a vulcanized sheet rubber flooring.

In your healthcare facility, it is important to not only provide an aesthetically pleasing environment, but also one that is hygienic and meets the continuous demands of the space. Rx products have been tested and shown to significantly reduce fall impact as well as provide an exceptional foot-fall reduction and energy return versus all other traditional resilient floorcoverings. In an environment where quiet is a necessity, Rx products are able to reduce structure-borne sound by 23 decibels (in accordance with

ASTM E2179), giving the patients the quiet they need to heal.

Clinical spaces face very unique and constant challenges every day. Your needs vary but your goal remains the same, provide a safe and healing environment for your patients and staff. Providing more is always an ambition, but not always possible. Ecore Commercial Flooring delivers more, making your ambitions a reality.
